

Presentation

How-To Slide Shows

Create a how-to presentation that helps students see how to give step-by-step instructions.

Materials:

- Topic
- Notes/Research
- How-to Planning Sheet
- Presentation Software

Before the Computer:

- Help your students select their topics. It is crucial to their success that your students choose topics they can describe.
- Tell your students first to do the process they choose several times. Then, as they do it, take notes on each step.
- They should not rely heavily on diagrams- instructions should be clear enough that the diagrams are only enhancements.
- Have them share their instructions with an editing buddy.

On the Computer:

- Have your students use their planning sheets to create a slide show about how to do their chosen activity. They should use sound, pictures, and diagrams.
- Create a step-by-step explanation of the procedure they are explaining with sounds, diagrams, and pictures.
- Have the students present the presentations to the class as they follow the directions.

How-To Slide Shows

Student's Name: _____

How-To Planning Sheet

If you need more slides to complete your instructions, use the back of the page.

1. Title and Introduction

2. Materials

3. Step 1

4. Step 2

5. Step 3

6. Conclusions/Finished Product
