

Presentation

Building a Food Chain

Help your students understand the connections of a food chain by having them create one of their own.

Materials:

- Presentation Software or Kid Pix

In Preparation:

- Have each student choose an animal.
- Each student must research the animal he/she has chosen and its parts in the food chain before working on the computer.

Procedure:

- Have each student draw a picture of the food chain, using his/her own illustrations, as well as clipart and stamps available from any graphic programs.

Options:

- Group your students into categories to see how interrelated the food chain is; for example, look at the food chains of ocean animals and pond life.
